

Vulnerability Assessment

Minimize costs through
proactive actions

Conducting vulnerability assessments can yield significant financial benefits by reducing the potential financial impact of security incidents, such as data breaches, and minimizing the cost of remediation efforts through proactive actions

Cybertech360 Security & Vulnerability Manager helps businesses stay compliant with user behaviour tracking, computer analysis, Active Directory and password policies. Manage risk assessment with tools such as missing patches and upgrade report, application vulnerabilities, installed software report, non-approved software report, and per asset and company risk scores.

Our vulnerability scanning solution provides IT Managers with compliance, deep asset discovery, risk assessment, and user router assessment. A risk management platform meets all requirements that are part of the IDENTIFY in the NIST cybersecurity framework.

Overall, vulnerability assessments are a valuable tool for SMBs to assess their security posture, identify vulnerabilities, and prioritize remediation efforts. By improving their security posture through vulnerability assessments, SMBs can protect against cyber attacks, comply with regulatory requirements, and minimize the risk of data breaches.

Features:

- Vulnerability tracking across assets and groups
- Risk assessment across an organization
- Complete asset discovery
- Track end-user VPN connections
- User behaviour tracking

Benefits

- Mitigates risks and shadow IT
- Lowers risk by securing Active Directory
- Users and clients stay compliant
