

Business Continuity and Data Recovery

Recover Your Computer System
Instantly From Any Disaster

An investment in business continuity and disaster recovery prepares your organization for sustainable growth.

In today's competitive world, small to medium sized businesses rely on their technology more than ever before. When systems fail, downtime is costly and recovering quickly is imperative to maintaining productivity and loss of revenue. CyberTech360 provides world class BCDR options and strategies to ensure you can recover quickly in the event of a disaster or other disruptive events; malicious or otherwise. Our verified backups protect your data and operations. We design your solution based on your risk comfort level.

CyberTech360 BCDR will protect your endpoints against ransomware, loss or theft and accidental endpoint data deletion. It streamlines recovery of the entire device configuration, setup, and applications with image-based restore. BCDR is essential for all businesses, but especially small to medium-sized organizations that may lack the resources to handle a disaster.

Recover From Ransomware or Any Disaster

Recover individual files and folders or perform a full bare-metal restore of the failed PC. No need to reinstall the OS, reconfigure applications, and recover files and folders with an easy point in time snapshot recovery.

Your BCDR should also include procedures for maintaining and testing the disaster recovery plan, including regular backups, testing the backups, and updating the recovery plan as necessary. This is essential to ensure that the organization can quickly restore systems and processes in the event of a disaster.

Small businesses rely on technology and data, and need to protect it. With Cyber-Tech360's Site-based and Cloud-based BCDR behind you, your business is always protected and resilient to disasters, with verified backups, restore options for any scenario, instant virtualization and ransomware protection.
